Education

Bachelor of Engineering, Computer Engineering

Toronto Metropolitan University (Ryerson University)

Toronto, ON

Graduation Date: Apr 2027

Experience

Competitions Team VP

Feb 2023

Metropolitan Engineering Competition

Toronto, ON

- Coordinated the design and implementation of several competition events through zoom and slack, and assisted in budget management for each competition.
- spearheaded competition outreach to the student body through multimedia marketing campaigns to achieve an overall turnout of **over 200 students** across all competitions.
- Oversaw competition implementation and contingency troubleshooting to ensure a smooth event experience for all guests.

Projects

Colligo | Next.js, Django, PostgreSQL, Docker, Nginx, Cloudflare, GitHub Actions

Mar 2026

- Engineered a production-grade architecture self-hosted on an **Ubuntu Linux** server, utilizing **Docker Compose** for container orchestration, an **Nginx** reverse proxy, and **Cloudflare** tunnels for secure **HTTPS** routing.
- Established a fully automated **CI/CD pipeline** via self-hosted **GitHub Actions** runners for seamless deployments, and optimized database concurrency using a **Supabase** transaction pooler.
- Developed a dynamic **Next.js** frontend powered by a **GraphQL** API with fast caching, and integrated a **DeBERTa** NLP model to automatically extract and highlight key technical terms from over 5,000 aggregated job postings.

Live ASL Translator | PyTorch, OpenCV, Google Mediapipe, Data Processing, Neural Networks, Computer Vision

June 2025

- A real-time **computer vision system** for American Sign Language recognition, classifying static ASL letters while rejecting non-sign gestures using two **custom deep learning models**
- utilizes a **Convolutional Neural Network** and **Google Mediapipe** to find, crop, preprocess, and infer an english letter from ASL signed using a webcam
- uses temporal smoothing and a **custom LSTM text model** to processes and segment the translated caption string of signed letters into sentences

Home Linux Server API | Ubuntu Linux, Docker Compose, Nginx, Cloudflare, GitHub Actions, Golang, WebSockets

April 2026

- Architected and deployed a self-hosted **Ubuntu Linux** production server, orchestrating services with **Docker Compose**, securing traffic via an **Nginx** reverse proxy, and exposing applications through **Cloudflare tunnels** with end-to-end **HTTPS**.
- Developed a real-time **server monitoring API** in **Golang** using **WebSockets** to stream live CPU, memory, and system metrics, paired with a responsive dashboard for visualizing infrastructure performance.
- Engineered modular backend services and scripting workflows with **Bash** and container networking, ensuring **scalability**.

Awards and Certifications

Getting Started with Deep Learning

December 2025

NVIDIA Deep Learning Institute

- An intuitive ground-up introduction to deep learning and neural networks including micro projects building, training, and refining small scale image-based networks

OpenCV Bootcamp

Oct 2025

OpenCV University

- Intermediate level experience with Computer Vision oriented Python library
- Covered topics such as Computer Vision, Digital Image Processing, Object tracking, Post Processing

Skills

Languages: Python, JavaScript, TypeScript, Java, C/C++, HTML/CSS, SQL, Golang

Frameworks & Developer Tools: React, Next.js, Django, PyTorch, OpenCV, NumPy, Tailwind, Git, Docker, cloudflare, Linux, Nginx
