Education

Bachelor of Engineering, Computer Engineering — Toronto, ON
Toronto Metropolitan University (Ryerson University) — *Graduation Date: Apr 2027*

Experience

Software Engineer Intern — Aug 2026
ReInvestWealth — *Toronto, ON (Remote)*

- Eliminated **$4,000/month** in **Firebase** overhead costs by slashing average database reads per query from **45,000** to **1,500** through designing an optimized document search algorithm that reduced time complexity from **exponential** to **linear**.
- Automated the extraction, **GIFI** categorization, and deduplication of financial data, successfully processing **1,300+** transactions across **160+** bank statements simultaneously, by architecting custom **MCP Tools** with **multi-step reasoning chains**.

Projects

CedarKey AI | *NestJS, tRPC, Prisma, pgvector, AWS S3, Stripe, Gemini, BullMQ, Jest, Testcontainers, Jenkins, Semgrep* — Jul 2026

- Architected and shipped a production SaaS platform for AI-generated rental contracts using **Next.js** and **NestJS** across a monorepo, onboarding **2 beta testers** who successfully processed **50 contracts**.
- Built a **RAG** legal compliance engine achieving 100% accurate retrieval of **848 vector embeddings** in an average of **3 seconds**, integrated **Stripe** subscriptions and webhooks, **AWS S3** signed PDF storage, and a **Puppeteer** e-signature pipeline generating PDFs in **under 8 seconds**.

Production Linux Server & Monitoring API | *Linux, Docker, Nginx, Cloudflare, GitHub Actions, Golang, WebSockets* — April 2026

- Deployed a self-hosted **Ubuntu Linux** production server with **Docker Compose**, an **Nginx** reverse proxy, and **Cloudflare tunnels**, maintaining **100% uptime** over the past 2 months.
- Developed a real-time **server monitoring API** in **Golang** using **WebSockets** with sub-**4ms** latency. Load tested with **k6**, sustaining **200 concurrent connections** at **100%** success and **95ms** average connection time.

Awards and Certifications

Intro to Deep Learning — December 2025
NVIDIA Deep Learning Institute

- Built and trained small scale image-based neural networks through a ground-up deep learning curriculum covering core training and refinement techniques such as activation functions, backpropagation, GANs, and transfer learning

SPLxUTSPAN 2026 Data Challenge — Feb 2026
University of Toronto Sports Analytics Group

- Utilized an **XGBoost regression model** to analyze the scaled angle, depth, and left/right deviation of the shot to predict basketball free throw shooting outcomes from biomechanical markerless motion capture data
- Achieved a **Mean Squared Error of 0.010815** between the predicted and actual shot outcome variables, placing 6th out of 41 entrants form universities across Canada

Skills

Languages: Python, JavaScript, TypeScript, Java, C/C++, HTML/CSS, SQL, Golang

Frameworks & Libraries: React, Next.js, NestJS, Node.js, Django, PyTorch, OpenCV, NumPy, Tailwind, tRPC, Prisma, scikit-learn, torchvision, Google Mediapipe, Puppeteer, BullMQ

Tools, Platforms & Cloud: Git, Docker, Docker Compose, Cloudflare, Linux, Nginx, AWS, PostgreSQL, pgvector, Redis, GitHub Actions, Jenkins, Vercel, Railway, Render, GCP, Machine Learning, ClickUp, Slack, MCP Servers, Claude Code, MCP Clients

Security & Testing: Jest, Testcontainers, k6, Semgrep (SAST), Snyk (SCA), Testing Pyramid (unit, integration, E2E), DevSecOps, Jenkins
